

The image shows a code editor window with a tab labeled 'test.p'. The editor contains Python code that uses the OpenCV library to read an image, check if it was loaded correctly, convert it to grayscale, and display both versions. The code is as follows:

```
# Import OpenCV library
import cv2

# Read the image (give correct path of your image)
image = cv2.imread("image.jpg")

# Check if image is loaded properly
if image is None:
    print("Error: Image not found!")
else:
    # Convert image to grayscale
    gray_image = cv2.cvtColor(image, cv2.COLOR_BGR2GRAY)

    # Display Original Image
    cv2.imshow("Original Image", image)

    # Display Grayscale Image
    cv2.imshow("Grayscale Image", gray_image)

    # Wait until any key is pressed
    cv2.waitKey(0)

    # Close all windows
    cv2.destroyAllWindows()
```
