

The image shows a code editor window with a tab titled 'test.py6.txt'. The editor has a menu bar with 'File', 'Edit', and 'View', and a toolbar with various icons including a search icon, a list icon, and a settings icon. The code is written in Python and demonstrates the process of reading an image, converting it to grayscale, creating a kernel, applying erosion, and displaying the results. The code is as follows:

```
import cv2
import numpy as np

# Step 1: Read the image
image = cv2.imread("input.jpg")

if image is None:
    print("Error: Image not found!")
else:
    # Step 2: Convert to Grayscale
    gray = cv2.cvtColor(image, cv2.COLOR_BGR2GRAY)

    # Step 3: Create a kernel (structuring element)
    kernel = np.ones((5, 5), np.uint8)

    # Step 4: Apply Erosion
    eroded_image = cv2.erode(gray, kernel, ite

    # Step 5: Display images
    cv2.imshow("Original Image", image)
    cv2.imshow("Grayscale Image", gray)
    cv2.imshow("Eroded Image", eroded_image)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

A smaller, semi-transparent version of the same code editor window is visible in the bottom right corner, showing the same code and a partial view of the 'File' and 'Edit' menus.
